

Species		Right Whale		Whale ID		Eg #1152	
Date first observed entangled (date seen prior without gear)		27 Aug 1981 (Unknown)					
Sex	Male	Birth year	Unknown		Age at entanglement		1+

Case study ID	CCS	NMFS		GEAR ID
Gear sample collected?			Gear type	

Photographs inadequate to determine complete entanglement configuration - no drawing available

Reproductive prior to entanglement detection?					
Reproductive after entanglement detection?					
Entanglement severity			Moderate		
Wound severity	Mouth	Head/ Rostrum	Flippers	Body	Flukes
	None	None	Unknown	None	Medium
Duration of time carrying gear		Minimum 2947 days, maximum unknown			
Disentangled?		No			
Status		Presumed dead - sighted in 2016 with new entglmnt			
Number of prior entanglement interactions		0			

Entanglement configuration	Rope with netting attached loosely wrapped around peduncle for over 8 years.
Anchoring point(s)	Flukes
Gear configuration confidence	High
Remaining questions	
Comments	Gear eventually shed.

Species		Right Whale		Whale ID		Eg #1306	
Date first observed entangled (date seen prior without gear)		15 May 1983 (01 May 1983)					
Sex	Male	Birth year	Unknown		Age at entanglement		1+

Case study ID	CCS	NMFS		GEAR ID
Gear sample collected?	No	Gear type		

Photographs inadequate to determine complete entanglement configuration - no drawing available

Reproductive prior to entanglement detection?					
Reproductive after entanglement detection?			Yes		
Entanglement severity			Minor		
Wound severity	Mouth	Head/ Rostrum	Flippers	Body	Flukes
	None	None	Unknown	Low	Low
Duration of time carrying gear		Minimum 1 day, maximum 135 days			
Disentangled?		No			
Status		Likely dead - last sighted in 2016 entgled from 2015			
Number of prior entanglement interactions		0			

Entanglement configuration	3 ropes loosely draped over back.
Anchoring point(s)	Mouth or flipper.
Gear configuration confidence	Low
Remaining questions	Poor photo documentation. Could not tell what body area gear originated from or how much gear was trailing.
Comments	Gear was later shed.

15 May 1983 PCCS

Species		Right Whale		Whale ID		Eg #1308	
Date first observed entangled (date seen prior without gear)		06 Sep 1984 (30 Sep 1983)					
Sex	Female	Birth year	1983		Age at entanglement		1

Case study ID	CCS		NMFS		GEAR ID	
Gear sample collected?		No		Gear type	Gillnet	

Photographs inadequate to determine complete entanglement configuration - no drawing available

Reproductive prior to entanglement detection?			No		
Reproductive after entanglement detection?			Yes		
Entanglement severity			Minor		
Wound severity	Mouth	Head/ Rostrum	Flippers	Body	Flukes
	None	Low	Unknown	None	None
Duration of time carrying gear		Minimum 1 day, maximum 371 days			
Disentangled?		No			
Status		Dead in 2011 from vessel strike			
Number of prior entanglement interactions		0			

Entanglement configuration	Length of gillnetting originated at mouth and extended over animals back.
Anchoring point(s)	Mouth
Gear configuration confidence	Low
Remaining questions	Uncertain if any gear was trailing.
Comments	Poor photo documentation.

06 Sep 1984 NEA

Species		Right Whale		Whale ID	Eg #1406
Date first observed entangled (date seen prior without gear)		02 May 1985 (09 Mar 1985)			
Sex	Female	Birth year	1984	Age at entanglement	1

Case study ID	CCS	NMFS		GEAR ID
Gear sample collected?	No	Gear type	Lobster	

No drawing available
No images available

Reproductive prior to entanglement detection?		No			
Reproductive after entanglement detection?		Yes			
Entanglement severity		Minor			
Wound severity	Mouth	Head/ Rostrum	Flippers	Body	Flukes
	Low	None	Unknown	None	Low
Duration of time carrying gear		Minimum 1 day, maximum 52 days			
Disentangled?		Yes			
Status		Presumed dead - Last sighted in 2000			
Number of prior entanglement interactions		0			

Entanglement configuration	Based on limited information, there was apparently a single line through the mouth.
Anchoring point(s)	Mouth
Gear configuration confidence	Low
Remaining questions	No information about amount of trailing line or other anchoring points.
Comments	Whale was disentangled from lobster gear by US Coast Guard off Pemaquid Point, ME. Poor images taken and not included here. Animal disappeared 15 years later which was unrelated to this event.

Species		Right Whale		Whale ID	Eg #1411
Date first observed entangled (date seen prior without gear)		15 May 1986 (13 Oct 1984)			
Sex	Male	Birth year	1984	Age at entanglement	2

Case study ID	CCS	NMFS		GEAR ID
Gear sample collected?	No	Gear type		

Photographs inadequate to determine complete entanglement configuration - no drawing available

Reproductive prior to entanglement detection?					
Reproductive after entanglement detection?					
Entanglement severity		Severe			
Wound severity	Mouth	Head/ Rostrum	Flippers	Body	Flukes
	Unknown	None	Unknown	None	High
Duration of time carrying gear		Minimum 1202 days, maximum 2168 days			
Disentangled?		No			
Status		Presumed dead - Last sighted in 2001			
Number of prior entanglement interactions		0			

Entanglement configuration	Rope tightly wound around tail stock for over 3 years resulting in deep cuts into the base of the flukes.
Anchoring point(s)	Tailstock
Gear configuration confidence	High
Remaining questions	None
Comments	Gear was shed after 3 plus years but animal’s condition slowly declined before it disappeared.

Species		Right Whale		Whale ID	Eg #1163
Date first observed entangled (date seen prior without gear)		29 Aug 1986 (19 Jun 1986)			
Sex	Female	Birth year	1981	Age at entanglement	5

Case study ID	CCS	NMFS		GEAR ID
Gear sample collected?	No	Gear type		

Photographs inadequate to determine complete entanglement configuration - no drawing available

Reproductive prior to entanglement detection?		Yes			
Reproductive after entanglement detection?		Yes			
Entanglement severity		Moderate			
Wound severity	Mouth	Head/ Rostrum	Flippers	Body	Flukes
	Medium	Low	Low	None	Low
Duration of time carrying gear		Minimum 1 506 days, maximum 1 697 days			
Disentangled?		No			
Status		Presumed dead - Last sighted in 1992			
Number of prior entanglement interactions		1			

Entanglement configuration	Single rope through mouth and over top of head remained there for ~ 4 years.
Anchoring point(s)	Mouth
Gear configuration confidence	High
Remaining questions	
Comments	Got entangled when with her first 1986 calf. Rope still attached when pregnant with her second calf (Oct 1990). Rope gone when sighted with her second calf in Feb 1991. By 1991 her condition was showing signs of decline with lesions evident on her head.

Species		Right Whale		Whale ID	Eg #1113
Date first observed entangled (date seen prior without gear)		25 Sep 1987 (05 Sep 1986)			
Sex	Male	Birth year	Unknown	Age at entanglement	7+

Case study ID	CCS	NMFS		GEAR ID
Gear sample collected?	No	Gear type		

Photographs inadequate to determine complete entanglement configuration - no drawing available

Reproductive prior to entanglement detection?		Yes			
Reproductive after entanglement detection?		Yes			
Entanglement severity		Minor			
Wound severity	Mouth	Head/ Rostrum	Flippers	Body	Flukes
	Low	None	Unknown	None	Low
Duration of time carrying gear		Minimum 719 days, maximum 1816 days			
Disentangled?		No			
Status		Dead - August 2010 possibly from a new entanglement event			
Number of prior entanglement interactions		1			

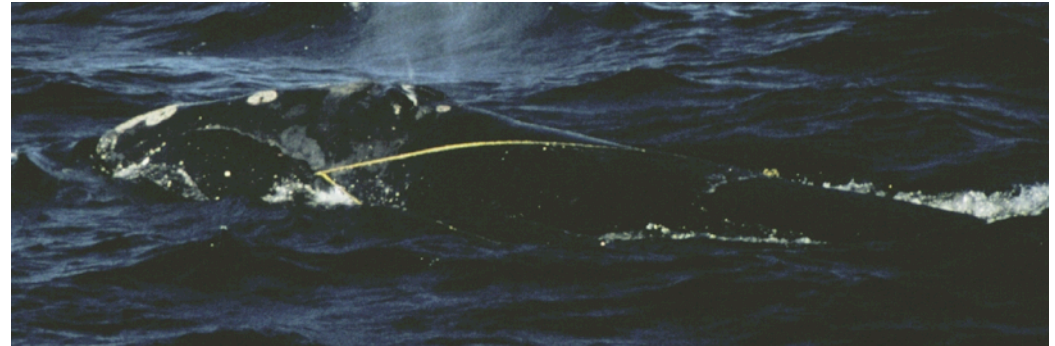

Entanglement configuration	Multiple lines coming out both sides of the mouth and loosely draped over back and flukes. No line appears to be trailing.
Anchoring point(s)	Mouth
Gear configuration confidence	High
Remaining questions	
Comments	Gear was shed after ~ 2 years.
